

ADA 2020 859-P

Estimated A1C Reduction in High-Risk Patients Over Two Years of Using a Digital Diabetes Management Platform

For total 368 high-risk type 2 users, results shown:

- Reduction of 1.42% eA1c and 18% average blood glucose sustained for two years
- Reduction of eA1c by 1.95% and 2.42% for high-risk (eA1c>9.0, eA1c>10.0) users
- Reduction of 20% in glycemic variability and sustainability for two years
